Introduction	iv
Part I: Introduction to Flex 3	1
Chapter 1: Why Flex?	3
What Is Flex?	3
What Is an RIA?	4
Clarifying the Competition	6
For the Love of Flex	7
Bursting Myths about Flash and Flex	7
10 Reasons to Love Flex	12
Summary	15
Chapter 2: The Flex 3 Ecosystem	17
A (Not So) Brief History of Flex	17
The Adobe Flex 3 Ecosystem	19
Runtimes	19
Languages	27
Frameworks and APIs	30
Data Communications	32
Servers	34
The Adobe Flex RIA Process Flow	35
Design and Development	36
Execution	37
Communication	37
Infrastructure	38
Future Additions to the Flex Ecosystem	38
Summary	39
Chapter 3: ActionScript 3.0 Fundamentals	41
Core Language Concepts	41
Basic Syntax	42
Reserved Keywords	43
Variables and Data types	44
Control Structures	44
Conditional Statements	44
Loops	46

Contents

Using Classes and Data types	47
Value Types	47
Numbers	48
Strings	49
Arrays	50
Vectors	52
Objects	53
Casting	54
Introspection	55
Object-Oriented Programming	57
The Class Object	58
Packages and Classes	58
Class Attributes	59
Class Members	59
Interfaces and Inheritance	64
Summary	65
Chapter 4: Using ActionScript 3.0	67
The Flash Platform Framework	67
Display Programming	68
Understanding the Display Architecture	68
The Event Model	69
Event Classes and Types	69
Event Process	70
Event Flow	71
The EventDispatcher Class	72
The Flash Player APIs	73
The Display API	74
The Flash AIR APIs	78
Flash 10 APIs	79
Summary	83
Chapter 5: Introduction to Flex Builder 3	85
Getting Started with Flex Builder	85
Flex Builder and Eclipse	86
Learning Flex and Getting Help	87
The Flex 3 Workbench	90
Workspaces	91
Editors	93
Views	93
Perspectives	94

What's New in Flex Builder 3	98
New Wizards	98
Design Mode Enhancements	98
Development Enhancements	99
CS3 Suite Integration	99
Summary	100
Part II: Developing with Flex 3	101
Chapter 6: Using Flex Builder 3	103
<hr/>	
The Flex Compilation Process	103
Development	104
Compilation	105
Publishing	106
About Projects	106
Creating New Projects	107
Creating a Flex Application	108
Creating a Flex Project	108
Using Design Mode	111
Using Data Binding	117
Using Triggers and Effects	118
Compiling Your Application	119
Creating an ActionScript Application	120
Creating an ActionScript Project	120
Comparing File Sizes	123
The (Undocumented) [SWF] Metadata Tag	123
[SWF] Metadata Properties	124
Summary	125
Chapter 7: MXML Fundamentals	127
<hr/>	
Language Principles	127
MXML Is XML	127
Naming Conventions	128
MXML Syntax	128
Display Hierarchy	129
MXML Namespaces	129
Using MXML	133
MXML Tags	133
MXML Properties	135
Using MXML and CSS	139
Using MXML and ActionScript	141
Summary	148

Contents

Chapter 8: Developing with Flex Builder 3 **149**

Managing Projects	149
Project Properties	149
Exporting Projects	154
Importing Projects	154
Navigating Projects	157
Building Applications	164
Creating a Debug Release	164
Creating an Export Release	165
Enabling Source View	167
Language Intelligence	170
Code Editing	170
Code Preferences	173
Code Introspection	173
Keyboard Shortcuts	176
Summary	178

Chapter 9: Customizing Flex Builder 3 **179**

Optimizing Flex Builder Performance	179
Project Development Best Practices	179
Eclipse Performance Management	181
Customizing the Workbench	186
Editing the Workspaces List	186
Using Custom Shortcuts	188
Layouts for Productivity	189
Managing Workspace Preferences	190
Using Code Repositories in Flex Builder	190
Using the Local History	191
Subclipse for Subversion Source Management	192
Summary	214

Part III: Working with Components **215**

Chapter 10: The Component Life Cycle and Class Hierarchy **217**

The Role of Flash in Flex Applications	217
The Flex Framework Life Cycle	218
Frame-by-Frame	218
The Life Cycle	220
Flex Class Hierarchy	222
Flash and Flex Class Packages	222
UIComponent	222

Container Classes	224
List Classes	225
Formatters, Validators, and Collection Classes	226
Framework Functions and Events	228
Summary	229
Chapter 11: Using Data Binding and Events	231
Using {Curly Braces} [Bindable] Metadata	231
Events	236
Capture Phase	236
Target Phase	237
Bubbling Phase	238
Stopping Events	238
Event Listeners	239
Using MXML	240
Using ActionScript	240
Event Types	241
Custom Events	241
Creating Custom Events	241
[Event] Metadata	242
Strategies for Using Custom Events	243
Summary	244
Chapter 12: User Interface Controls and Containers	245
Static Controls	245
mx.controls.Label and mx.controls.Text	245
mx.controls.Image	246
mx.controls.SWFLoader	247
mx.controls.HRule and mx.controls.VRule	247
mx.controls.ProgressBar	248
Input Controls	248
mx.controls.Button and mx.controls.LinkButton	249
mx.controls.TextInput and mx.controls.TextArea	249
mx.controls.NumericStepper	250
mx.controls.DateChooser and mx.controls.DateField	250
mx.controls.CheckBox	251
mx.controls.ComboBox	252
mx.controls.RadioButton and mx.controls.RadioButtonGroup	252
mx.controls.HSlider and mx.controls.VSlider	253
mx.controls.RichTextEditor	254

Contents

mx.controls.PopUpButton	254
mx.controls.PopUpMenuButton	255
mx.controls.ColorPicker	256
Layout Containers	256
mx.containers.Canvas	256
mx.container.VBox and mx.container.HBox	257
mx.containers.HDividedBox and mx.containers.VDividedBox	258
mx.core.Application, mx.containers.Panel, mx.containers.TitleWindow	259
mx.containers.Grid	260
mx.containers.Tile	261
mx.containers.Form	262
mx.containers.ControlBar	263
mx.containers.ApplicationControlBar	264
Navigation Components	264
creationPolicy	264
mx.containers.Accordion	265
mx.containers.TabNavigator	265
mx.containers.ViewStack	266
mx.controls.LinkBar	267
mx.controls.TabBar	267
mx.containers.MenuBar and mx.controls.Menu	268
mx.controls.ButtonBar and mx.controls.ToggleButtonBar	269
List Controls	270
Summary	270
Chapter 13: Layout Strategies	271
Coordinate Positioning	271
Constraint Positioning	272
Positioning by Percentage	273
Positioning by Alignment	274
Advanced Constraints	275
ConstraintColumns	276
ConstraintRows	277
Constraints in ActionScript	278
Constraint Sizes	278
Using includeInLayout	279
Performance Considerations	280
Summary	280
Chapter 14: User Interface Integration	281
Creating Forms	281
Submitting Form Content	284

Building Forms with Flex Builder Design View	285
Setting the defaultButton on the Form	286
Customizing Tooltips	286
Custom ToolTips	286
Creating Pop-Ups	288
Alerts	289
Using the PopUpManager	291
Interacting with Pop-Ups	293
Custom Cursors	295
Cursor Management	295
Busy Cursors	295
Hand Cursors	296
Custom Cursors	296
Summary	297
Chapter 15: Getting Started with AIR	299
<hr/>	
What Does AIR Provide?	299
Why Use AIR?	300
Applications That Can Be Built with AIR	300
Requirements for AIR	301
Building an AIR Application	302
The IntroToAIR.mxml File	303
The IntroToAIR-app.xml Descriptor File	304
The AIR Configuration File	306
Building an AIR Application Part II	311
Modifying the IntroToAIR.mxml Window	311
The MainWindow.mxml File	313
The IntroToAIR-app.xml Descriptor File	314
Summary	316
Part IV: Advanced Component Development	317
<hr/>	
Chapter 16: Custom ActionScript Components	319
<hr/>	
Company Logo Example	320
UIComponent and IUIComponent	320
CompanyLogo.as	321
Component Structure	323
Component Properties and the Flex Framework Life Cycle	323
Invalidate Functions	324
Adding Child Components	325
Using invalidateProperties() and Applying Properties to the Component	326
Measuring Components	327

Contents

Component Layout	328
Selecting the Base Class for Your Component	330
Sizing Child Components	332
RockerSwitch Example	333
Summary	341
Chapter 17: Custom MXML Components	343
MXML Versus ActionScript Components	343
Customizing the Layout	345
Overriding updateDisplayList()	345
Overriding layoutChrome()	346
Setting Up Metadata Tags	348
Creating Template Components	348
DefaultProperty Meta Tag	350
Creating Custom Children	350
Extending MXML Components	351
Summary	352
Chapter 18: Extending Flex Components	353
A Look at Composite Components	353
Creating Composite Components	354
Properties	355
Events	356
Layout	357
Extending Existing Components	358
Extending Button	358
Extending TextInput	359
Extending UIComponents versus Standard Components	360
Appearance versus Behavior	361
Custom Containers	361
Applying the Flex Component Life Cycle	362
Tag Cloud	363
Customizing Composite Components	365
Summary	367
Chapter 19: Advanced Event Programming	369
Custom Events versus Standard Events	369
Extending Standard Events	371
One versus Many	371
Adding Metadata to AS Class and MXML Files	372
Adding Custom Events to Custom Components	372
Handling Event Runtime Errors	373

Event Flow	373
Event Priority	373
Preventing or Changing Default Behaviors	374
Forwarding Events	374
Custom Data Binding	377
Using the Bindable Metadata Tag	377
Custom Data Binding with the Bindable Metadata Tag	377
Using BindingUtils	380
Custom Data Binding in ActionScript	380
ChangeWatcher	380
Summary	381
<hr/> Chapter 20: State Management	<hr/> 383
What Are States?	383
The States Property	384
Adding States	384
Creating States Using Flex Builder's Design View	384
Changing States	387
Testing the Example	387
Understanding the MXML Tags	388
Adding Components	388
Removing Components	389
Gone, But Not Destroyed	389
Setting and Changing Properties and Styles	390
Changing Event Handlers	390
Data Binding	391
Creating States in ActionScript	391
Real Estate Management	393
Common Problems	393
States versus ViewStacks	394
Optimization	394
Anticipating Transitions	395
Summary	396
<hr/> Chapter 21: Using Libraries	<hr/> 397
ActionScript Libraries	397
Flash Player Library	398
Flex Libraries	398
SWCs versus SWFs	399
Anatomy of a SWC	399
Creating a Library with Flex Builder	399
Creating a Library Project	399

Contents

Adding Sources	400
Creating the SWC	400
Creating Libraries with COMPC	402
COMPC Options	403
Adding Assets	403
Specifying the Manifest File	403
Best Practices for Component Libraries	404
Sharing Source Directories	404
Build to Sell	405
Using Libraries	405
The libs Folder	405
The Build Path	406
Using Assets from Libraries	407
Using SWC Files	407
Summary	408
Part V: Visual Effects and Multimedia	409
Chapter 22: Styles	411
What Are CSS Styles?	411
Inline Styling Versus CSS	411
Component Styles	413
CSS Constraint-Based Layout	415
CSS Styles and Class Inheritance	418
CSS Styles and Subcomponents	419
Summary	422
Chapter 23: Skinning and Themes	423
What Are Skins?	423
Embedded Assets	423
Programmatic Skins	424
Applying Skins	424
Defining Skins per Object	426
Defining Skins in Style Sheets	426
Scaling and Scale-9 Grids	428
Changing Styles at Runtime	430
Themes	433
Default Flex 3 Themes	433
Applying Themes	433
Creating Themes	435
Separating Themes to Libraries	435
Summary	435

Chapter 24: Visual Effects	437
What Are Flex Effects?	437
Built-In Flex Effects	440
Applying Effects	446
Data Effects	448
Easing Functions	449
Composite Effects	450
Transitions	454
Effect Events	457
3D Effects	458
Flex 4 Effects	458
Summary	459
Chapter 25: Dynamic Skinning and the Drawing API	461
Understanding the Drawing API	461
Basic Programmatic Drawing	462
Programmatic Skins	471
Creating and Applying Programmatic Skins	472
Additional Drawing API Capabilities	475
Masks	476
Filters	477
Blend Modes	478
Degrafa	479
Summary	479
Chapter 26: Flash Integration	481
Flash Platform Development Workflows	482
The Flash-Flex Workflow	483
Creating Flex Component Skins in Flash	485
Using the Flex Skin Design Extension	486
Skinning a Custom Flex Component	490
Planning Your Custom Flex Component	490
Building the Flex Component	492
Building the Flash Skin	494
Skinning the Flex Component	498
Summary	501
Chapter 27: Loading External Assets	503
Loading Images	503
The SWFLoader Class	506
The Loader Class	507

Contents

Runtime Shared Libraries	511
Summary	511
Chapter 28: Video and Sound	513
Methods for Bringing in Media	513
Usable File Formats	514
Integrating the Media Content	515
Understanding Progressive Loading and Streaming	519
The Sound Class	519
The SoundLoaderContext Class	520
Playing and Controlling Sound	521
Accessing ID3 Information	525
The SoundMixer Class	528
The Microphone Class	528
Video	528
Video Classes and Components	528
The VideoDisplay Component	536
Cue Points	538
The Camera Class	538
Undocumented Video Classes	539
Flash Player MovieStar Update	539
Summary	543
Chapter 29: Advanced Flash Integration	545
Bringing Flex Classes into Flash	545
Importing Custom Flex Classes through RSLs	546
Importing Native Flex Classes	547
Bringing Flash into Flex	547
The Flex Component Kit for Flash CS3	547
Porting Flash Native Components into Flex	551
Custom States and Transitions in Flex Components	556
Summary	567
Part VI: Data Management	569
Chapter 30: Working with Data	571
XML	571
Quick XML Primer	571
XML and ActionScript: Before E4X	573
XML and ActionScript 3.0: Using E4X	576

XXX

Collections API	582
IList	582
ICollectionView	582
ListCollectionView	586
Associative Arrays/Dictionary	589
Using Strings as Keys	589
Using Objects as Keys	590
Repeaters	592
During Execution	592
After Execution	593
Handling Interaction	593
When Not to Use Repeater	594
Summary	594
Chapter 31: Formatters and Validators	595
Overview	595
Formatters	596
Using Standard Formatters	596
Handling Input Data Errors	600
Validators	601
Using Standard Validators	602
Changing the Default Error Messages	605
Triggering Validation	606
Regular Expressions in ActionScript 3	607
Common Regular Expression Use Cases	607
A Regular Expression Primer	607
RegExpValidator: A Validator's Validator	608
Customizing and Centralizing Formatters and Validators	609
Centralizing Formatters	609
Centralizing Validators	610
Summary	612
Chapter 32: Using the List Components	613
ListBase Is Everywhere	613
ListBase APIs	614
Working with the List Class	617
Item-Editing Functionality in List	618
List Descendents	619
The Menu Class	619
Creating Menu Objects	619
Working with the Menu Class	620

Contents

The TileBase Class	621
HorizontalList	621
TileList	621
List, HorizontalList, and TileList — Optimized Memory Consumption Summary	622
Chapter 33: Advanced Data Controls	623
Overview	623
Tree	624
Feeding the Tree	624
Changing the Look of the Tree	625
Working with the Tree Control	626
DataGrid	628
Populating the DataGrid	628
Working with Columns	629
Handling Events	631
Customizing Renderers	632
Customizing Cells	632
Headers	636
AdvancedDataGrid	637
Implementing the AdvancedDataGrid	637
Grouping Data in the AdvancedDataGrid	638
Hierarchical Data in the AdvancedDataGrid	639
OLAPDataGrid	640
An OLAP Primer	640
Working with the OLAPDataGrid	640
Summary	644
Chapter 34: Drag and Drop in Flex	647
Overview	647
Working with Drag and Drop-Enabled Components	648
Enabling a List for Drag and Drop	650
Moving an Item	650
Preventing Duplicates	651
Working with Drag and Drop Events	651
Adding Drag and Drop Support to Nonenabled Components	652
Setting Up Your Component as a Drag Initiator	653
Setting Up Your Component as a Drop Target	654
Additional Drag and Drop Tips	655
Custom DragSource Formats	655

Custom Drag Proxy	655
Maintaining Type Information	656
Summary	656
Chapter 35: Drag and Drop in AIR	657
Overview of AIR Drag and Drop	657
The Clipboard	658
The NativeDragManager	660
Dragging Data from an AIR Application	662
Dragging Files to an AIR Application	666
Summary	669
Chapter 36: Using the Charting Components	671
Understanding Charting	671
Assigning Data to a Chart	671
Chart Types	672
Chart Axes	680
Chart Series	681
Chart Data Tips	682
Chart Legends	683
Runtime Chart Interaction	684
Handling User Interaction	684
Programmatic Interaction	684
Customizing a Chart's Look and Feel	685
Custom Renderers	685
Styling	686
Effects	686
Summary	687
Chapter 37: Resource Bundles and Data Localization	689
Overview	689
L10n Using Properties Files	690
Understanding Properties Files	690
Dealing with Character Encoding	691
Setting Up Locales in Your Flex Project	692
Implementing i18n in Flex 3	694
Utilizing Your Resources	694
Loading Resources at Runtime	698
Resource Modules	698

Contents

Programmatically Generating ResourceBundle	699
Pairing Resources with Modules	699
Globalizing AIR Applications	699
Summary	700
Part VII: Client Communications	701
Chapter 38: Browser Communication in Flex	703
Understanding the Web Context	703
Using flashVars to Pass Data into Flex	704
Linking to an External Page URL	706
Interacting with JavaScript	706
Invoking JavaScript from Flex	707
Invoking ActionScript from JavaScript	708
Passing Data Between ActionScript and JavaScript	709
Using the Flex-Ajax Bridge	717
Disabling Browser Integration	718
Summary	719
Chapter 39: HTML Mashups with AIR	721
Why Embed HTML in an AIR Application?	721
YouTube Sample	722
Displaying HTML in AIR	722
Loading Remote Content	723
Loading In-Memory Content	724
Loading Local File Content	724
Interacting with JavaScript	726
Calling Embedded JavaScript from ActionScript	726
Calling ActionScript from JavaScript	728
Controlling the HTML DOM from ActionScript	729
Summary	730
Chapter 40: Deep Linking	731
Deep Linking on the Web	731
Deep Linking with Flex	732
Fragment Identifiers in URLs	733
Flex 3 Support for Deep Linking	733
Using the BrowserManager API	734
Under the Hood: How Flex Deep Linking Works	738
Real-World Deep Linking: the Space Image Browser	739
Example #2: Working with Navigational States	740
Example #3: A More Sophisticated Image Browser	743

Search Engine Indexing and Optimization	747
Related Technologies and Tools	748
SWFAddress	748
UrlKit	748
History Manager	749
Summary	749
<hr/> Chapter 41: System Interactions in Flex	<hr/> 751
Detecting Client System Capabilities	751
Going Full Screen	757
Enabling Right-Click Context Menus	760
Adding and Removing Context Menu Options	760
Invoking Actions from Context Menus	763
Limitations of System Interactions	765
Limitations of Full-Screen Mode	765
Limitations of Custom Context Menus	766
Summary	766
<hr/> Chapter 42: Native Desktop Support with AIR	<hr/> 767
Working with Windows	767
Creating a Native Window	768
The Native Window Explorer	773
Native Menus	774
Context Menus	774
Windows- and Application-Level Menus	780
Interacting with the System Tray/Dock	782
Sending Notifications	784
Detecting User Presence	784
Monitoring Network Connection	785
AIR Capabilities and the Flash Runtime	786
Enabling Full-Screen Mode	787
Summary	787
<hr/> Chapter 43: LocalConnection and Shared Objects	<hr/> 789
Overview	789
The LocalConnection Class	789
SWF-to-SWF Communication	790
Crossing Domain Boundaries	792
Working with Data	793
Working around the 40KB Limit	793
Standard LocalConnection Errors	794

Contents

Working with Local Shared Objects	794
Creating or Retrieving Local Shared Objects	795
Storing Data in Local Shared Objects	795
Retrieving Data from Local Shared Objects	795
Explicitly Saving Local Shared Objects	795
Deleting Properties and Destroying Local Shared Objects	797
Additional Information	797
Serializing Custom Classes	799
Summary	801
<hr/> Chapter 44: File Management with Flex	<hr/> 803
Overview	803
Prerequisites	803
Using the FileReference Class	804
Handling FileReference Events	804
Uploading Files	805
Downloading Files with FileReference	808
Canceling a File Upload or Download	808
Working with Multiple Files	808
Server-Side Considerations	810
Summary	811
<hr/> Chapter 45: Local File Management with AIR	<hr/> 813
File Operations	813
Referencing Directories	813
Referencing Files	814
Navigating Paths	814
Synchronous versus Asynchronous API	816
Copying a File Synchronously	817
Copying a File Asynchronously	817
Other File and Directory Operations	819
Checking for Existence	819
Deleting Files and Directories	819
Moving Files and Directories	819
Enumerating a Directory	820
Creating Temporary Directories and Files	820
Working with Native File Dialogs	821
Native Directory Browser	821
Native Browse for Open Dialog	822
Native Browse for Open Multiple Dialogs	824
Native File Save Dialog	825

Reading and Writing File Data	826
Saving Bitmap Data as a JPEG File	827
Reading XML Data from a File	828
Filesystem Controls	828
Encrypted Local Data	831
Writing Data	831
Reading Data	831
Deleting Data	832
Summary	832
Part VIII: Server Integration	833
Chapter 46: Introduction to RPC Services	835
<hr/>	
Overview	835
The mx.rpc Libraries	837
Differences between MXML and ActionScript Classes	838
Parameter Binding versus Explicit Parameter Passing	838
Working with the HTTPService Component	839
Working with the WebService Component	841
Using a WebService in MXML	841
Calling a WebService in ActionScript	844
Debugging Remote Service Calls	845
Network Packet Sniffing	846
Debug Tracing in mx.rpc	846
Choosing a Protocol and Server Implementation	850
Alternative Server Implementations for AMF	850
Summary	851
Chapter 47: Error Handling	853
<hr/>	
Exception Handling with Synchronous Code	853
Flash Debug Player versus Release Player	853
Try/Catch/Finally	855
Exception Bubbling	856
Custom Error Types	858
Asynchronous Error Handling with Events	860
Important Error Events	861
Asynchronous Events in the Debug Player	862
Summary	863

Contents

Chapter 48: Flex and Flash Media Server	865
Benefits of Streaming Video with the FMS	865
Exercise 1: Playing Video On Demand	866
Setting Up Applications and Understanding Instances	867
Developing for the Flash Media Server in Flex	868
Exercise 2: Using the Bandwidth Check System of the Flash Media Server	869
Understanding the Netstream with FMS	872
Buffer Control	873
Publishing Video	874
Exercise 3: Using the Flash Media Server for Live and Recorded Streams	875
Data with the Stream	877
Exercise 4: Flash Media Server	878
Summary	880
Chapter 49: RESTful Web Services with Flex and the Zend Framework	881
What Is a RESTful Web Service?	881
The Routes Sample RESTful API	882
Setting Up the Server and Development Environment	883
Client Software You Might Need	886
How Zend Works	886
The Flex Sample Application	889
Retrieving Data from a RESTful Service	889
Creating and Updating Data with a RESTful Service	894
Deleting Data from a RESTful Service	896
Summary	896
Chapter 50: Integrating Flex and Java	899
Introduction to the Routes Web Service	899
Setting Up the Server and Development Environment	900
Server Software Requirements	900
Client Software You Might Need	902
The Grails Routes Web Service	902
Grails Code Supporting the Web Service	903
The Flex Sample Application	906
The RouteService.as Service Class	906
Using IResponder	906
Working with Custom Server-Side Errors	909
Summary	913

Chapter 51: Web Services with .NET and Flex	915
Introduction to the Routes Web Service	915
Setting Up the Server and Development Environment	916
Server Software Requirements	916
Client Software You Might Need	918
The .NET Routes Web Service	918
.NET Code Supporting the Web Service	918
The Flex Sample Application	921
The Import Web Service (WSDL) Tool	922
Accessing the Web Service	924
Working with Custom Server-Side Errors	925
Summary	927
Chapter 52: Offline Data Access with AIR	929
Introduction to SQLite	929
SQLite versus XML	930
Synchronous versus Asynchronous	930
Creating a Database	931
Opening a Database Asynchronously	931
Opening a Database Synchronously	933
Working with Data Definition Language	933
Working with Data	935
Creating Data	936
Retrieving Data	938
Updating Data	939
Deleting Data	940
Using Transactions to Import Data	941
Making Online Data Available for Offline Access	943
Importing XML into a SQLite Database	944
Improving the XML to SQLite Importer	948
Using Third-Party SQLite Database Management Applications	949
Summary	949
Part IX: Data Services	951
Chapter 53: Introduction to LCDS	953
Overview of LCDS	953
LCDS Resources	955
Understanding LCDS	955
Data Service Solutions	956

Contents

Client Architecture	956
Server Architecture	958
The Service Types	959
Communication Channels	961
Action Message Format (AMF)	962
Creating an LCDS Project in Flex Builder	963
The New Flex Project Wizard	963
Configuring the Application Server	966
Troubleshooting	968
Logging	968
Server-Side Debugging	969
Summary	969
Chapter 54: LCDS and ColdFusion	971
ColdFusion 8 and Integrated LCDS	971
LCDS-Specific ColdFusion Installation Screens	971
LCDS-Specific ColdFusion Administrator Screens	973
Event Gateways	975
DataServicesMessaging	976
DataManagement	976
Data Management	976
Summary	977
Chapter 55: The Message Service	979
Message Service Overview	979
Message Service Technology Explained	979
Publish and Subscribe	979
Producers and Consumers	980
Messages Travel through a Channel	980
Pushing Messages from the Server	980
Using the Message Service	981
Configuring a Destination on the Server	981
Creating Messages on the Client	983
Sending Messages	984
Receiving Messages	985
Declaring Producers and Consumers in MXML	986
Filtering Messages	987
Detecting Connectivity	988
Publishing from the Server	988
Message Service Applications	990
Example 1: Chat Rooms	990

Example 2: Stock Price Ticker	993
Example 3: Generating a PDF	997
Summary	1004
Chapter 56: The Data Management Service	1005
Overview of the DMS	1005
Why Use the DMS?	1006
All about Domain Modeling	1006
Create, Read, Update, Delete	1006
Sharing Data Among Users	1006
Paging Large Data Sets	1007
Occasional Connectivity	1008
Seeing Is Believing: The Six-Line Demo	1008
Line 1: Declaring a Data Service	1009
Line 2: Declaring a Collection for the Managed Data	1009
Line 3: Providing Managed Data to a Data Grid	1009
Line 4: Filling the Collection	1009
Line 5: Committing Changes and Synchronizing Clients	1010
Line 6: Reverting Changes	1010
Behind the Scenes	1010
DMS Technology Explained	1010
Client and Server Components	1010
Managed Data	1011
Managed Relationships	1011
Client Programming	1012
Server Integration	1014
Client and Server Collaboration	1015
Example Application: DMS Fleet Tracker	1015
Domain Modeling	1016
DMS Configuration	1019
Custom Assemblers	1022
Client Coding	1024
Further Considerations	1027
Summary	1028
Chapter 57: Advanced Data Management Services	1029
Overview of DMS	1029
Summary-to-Details Modeling	1030
Replace Lazy Relationship with Get Item	1030
Overcoming Item-Pending Errors	1031
Repeated Attacks	1032

Contents

Managing Shared and User-Specific Data	1033
A Simple Instant Messaging System	1033
Creating a New MessageDetails Item	1034
Creating and Delivering the User Messages	1034
Streaming AMF to an NIO End Point	1036
Learning More	1036
Summary	1037
<hr/> Chapter 58: The Data Services Stress Testing Framework	<hr/> 1039
Overview	1039
Stress Testing a Data Management Service Application	1041
Prerequisites	1041
Writing the Test Application	1041
Configuring the Server	1044
Configuring and Starting the Browser Servers	1046
Compiling the Test Administrator	1047
Running the Stress Test	1047
Further Topics	1049
Parameterizing Test Applications	1049
Preconfiguring the Test Administrator	1049
Creating Customized Test Reports	1050
Summary	1051
<hr/> Chapter 59: Using BlazeDS	<hr/> 1053
Overview	1053
BlazeDS Features	1054
Services and Client Components	1054
Channels of Communication	1055
Integration Points	1055
Developing a BlazeDS Project	1056
Installing the BlazeDS Turnkey	1056
Creating a Combined Flex/Java Project	1057
Using a Remote Object	1060
HTTP and Web Services	1067
Summary	1071
<hr/> Part X: Using Cairngorm	<hr/> 1073
<hr/> Chapter 60: MVC Frameworks	<hr/> 1075
What Is MVC?	1075
MVC Components	1076
Understanding the Data Model	1076

Understanding the View	1077
Understanding the Controller	1077
Putting the Pieces Together	1078
Why MVC?	1078
Abstraction	1079
Component Reuse	1079
Distributed Development	1079
Maintenance	1080
Is There a Definitive MVC?	1080
An MVC Approach to Component Architecture	1081
Summary	1081
<hr/> Chapter 61: Introduction to Cairngorm	<hr/> 1083
Overview	1083
The Steps of a Cairngorm Interaction	1083
The User Gestures	1084
An Event Is Dispatched	1085
A Command Executes	1086
A Business Function Is Delegated	1087
A Service Is Located and Invoked	1089
The Model Is Located and Updated	1090
The View Reflects the Changes	1092
Summary	1094
<hr/> Chapter 62: Applied Cairngorm	<hr/> 1095
Getting Started	1095
The Main Players	1096
Model Locator	1096
Front Controller	1102
Cairngorm Events	1104
Cairngorm Commands	1108
Business Delegates	1110
Service Locator	1113
Value Objects	1115
Summary	1118
<hr/> Chapter 63: Advanced Cairngorm	<hr/> 1119
The Presentation Model Pattern	1119
Using Cairngorm with Presentation Models	1120
Sample Cairngorm Presentation Model Application	1121
Domain Models	1124
Taking Things Further	1125

Contents

Organizing Cairngorm Projects	1125
Small Cairngorm Projects	1125
Large Cairngorm Projects	1126
Cairngorm Anti-Patterns	1127
The Fat Controller	1127
Model Locator Landfill	1128
Chains of Dependency	1129
Customizing Cairngorm	1131
Logging Cairngorm Events and Commands	1131
Timing Asynchronous Commands	1132
Injecting Dependencies into Commands	1133
Stubbing the Service Layer	1135
Decentralized Controllers	1136
Disposable Controller	1137
Summary	1138
Part XI: Application Development Strategies	1139
Chapter 64: Best Practices	1141
Coding Standards	1141
Consistency	1141
Clarity	1142
Cleanliness	1142
Object-Oriented Principles	1149
Encapsulation	1149
When to Use Public/Private/Protected/Final Functions	1150
Inheritance	1151
Code Behind	1158
Summary	1160
Chapter 65: The Security Model	1161
Understanding the Security Sandbox	1161
What Is crossdomain.xml?	1162
Local Sandboxes	1167
Summary	1169
Chapter 66: Modular Application Development	1171
Overview	1171
Why Modular Development?	1172
Building Components	1173
Runtime Shared Libraries	1173

Using the Module and ModuleLoader Classes	1173
Cross-Module Communication	1177
Cross-Module Data Access	1182
Summary	1187
<hr/> Chapter 67: Application Performance Strategies	<hr/> 1189
Understanding Object Creation Policies	1189
Structuring Data for Performance	1190
Lazy Loading Data	1190
Impacts of Multiple Service Invocations	1191
Managing Event Listeners and Data Bindings	1192
Collection Events	1192
Cleaning Up Unused Event Listeners	1194
Weak Referenced Event Listeners	1194
Cleaning Up Event Listeners Manually	1194
Associative Arrays and Dictionaries	1195
Working with Graphics	1198
Frame Rates	1198
Using Bitmap Caching	1198
Managing External SWF Content	1199
Object Caching and Recycling	1199
Summary	1201
<hr/> Chapter 68: Project Documenting with ASDoc	<hr/> 1203
What Is ASDoc?	1203
Using ASDoc	1204
ASDoc Comments and Formatting	1205
ASDoc Tags	1206
Classes	1206
Functions	1207
Properties	1208
Getters and Setters	1209
Metadata	1210
Formatting with HTML	1211
Referencing Outside Elements	1212
Excluding Classes from Generated Output	1213
Applying Custom Templates	1213
Summary	1214

Contents

Chapter 69: Desktop Deployment with AIR **1215**

Code Signing and Certificates	1215
Acquiring a Certificate	1216
Creating and Signing an AIR Package in Flex Builder	1218
Code Signing with a Developer Certificate	1220
Package and Signing AIR Applications with the Command Line	1222
Distributing AIR Applications	1222
Web Page Badge Installation	1223
Using the Web Badge SDK	1223
Silent Installations	1226
Updating AIR Applications	1227
Summary	1228

Chapter 70: Dual Deployment for Flex and AIR **1229**

Coding by Interface	1229
Pros	1231
Cons	1231
Setting Up the Flex Builder Projects	1232
Referencing the MainAppEntryPoint Component	1233
Working with the IApplicationPersistence Interface	1235
Working with the ApplicationPersistenceFactory	1235
Using Conditional Compilation	1238
Pros	1238
Cons	1238
Overview of the Conditional Compilation Approach	1238
Looking at the ApplicationPersistence File	1239
Configuring the Flex Compiler	1240
Summary	1241

Part XII: Testing and Debugging **1243**

Chapter 71: Debugging Flex Applications **1245**

Overview	1245
Flash Debug Player	1245
The Flex Builder Debugging Perspective	1246
Placing Breakpoints	1246
Launching an Application in Debug Mode	1249
Stepping through Code	1250
Examining Application State	1252
The Command-Line Debugger	1255

Additional Debugging Techniques	1255
Debugging Java Server-Side Code	1255
Monitoring Internet Traffic	1257
Application-Specific Debugging	1259
Making the Most of Logging	1259
Debugging Bindings	1260
Adobe Public Bug Database and Issue Reporting System	1262
Summary	1265
<hr/> Chapter 72: Using the Flex Profiler	<hr/> 1267
Overview	1267
Before You Get Started	1268
Profiling Basics	1268
Performance Profiling and Optimization Best Practices	1268
Memory Profiling Basics	1270
Performance Profiling Basics	1270
Sampling Profiler Basics	1270
Flex Builder 3 Profiling	1271
The Profiling Perspective	1271
Launching the Profiler	1272
Using the Memory Profiler	1276
Using the Performance Profiler	1284
Filtering in the Profiler	1287
Saving and Loading Profiling Data	1289
Other Useful Features	1290
The Profilers in Action	1292
Using the Memory Profiler to Detect Leaks	1292
Using the Performance Profiler to Optimize an Algorithm	1296
Creating Your Own Profiler	1300
Summary	1301
<hr/> Chapter 73: Unit Testing and Test-Driven Development with FlexUnit	<hr/> 1303
Overview	1303
Why Write Tests?	1304
Preventing Bugs in the First Place	1304
Gaining the Confidence to Refactor	1304
Driving Improvements in Design	1304
Writing Testable Software	1304
Happy Developers and Effortless Documentation	1305

Contents

Technology and Terminology	1305
The FlexUnit Library	1305
Unit Tests, Test Cases, and Test Suites	1306
Running Tests	1306
Test-Driven Development by Example	1307
Preparing for Unit Testing	1307
Creating a Test Case	1308
Assembling a Test Suite	1308
Failing the Test!	1309
Prepare, Invoke, Assert	1310
Happy and Unhappy Paths	1313
Setting Up and Tearing Down	1315
White Belt in Testing	1317
Further Topics	1318
Organizing Test Suites	1318
Removing Dependencies with Mock Objects	1318
Continuous Integration with Ant and Maven	1322
Eventful Test Cases	1323
Test Coverage	1323
Behavior-Driven Development	1324
Summary	1324

Chapter 74: The Logging Framework **1327**

Overview	1327
Using the Logging Framework	1328
Creating a Logging Target	1328
Getting the Right Logger	1328
Logging at Different Levels	1329
Filtering Log Statements	1330
Log Only When Necessary	1330
Customizing the Logging Framework	1331
Implementing a Remote Logging Target	1331
Implementing the Java Remote Logger	1332
Creating a Client that Logs Remotely	1334
Further Topics	1335
Embedded Log Viewer	1335
Stopwatch Logging	1337
Logging to Firebug with ThunderBolt	1339
Removing Logging from Production Code	1341
Summary	1342

Chapter 75: The Automation Framework	1343
Overview	1343
The Technology Explained	1344
Recording and Playback	1344
The Automation Libraries	1345
Runtime or Compile-Time Automation	1345
Component Identification	1346
Automating a Simple Application	1346
Installing an Automation Tool	1347
Creating a Testable Application	1347
Compiling for Automation	1348
Recording a Test Script	1349
Replaying a Test Script	1352
Further Topics	1353
Automating Custom Components	1353
Creating a Custom Agent	1353
Summary	1354
Appendix A: ActionScript Language Comparison	1355
Runtime Environment Concerns	1355
Compilation	1355
Runtime Engines	1355
Memory Management	1356
Block-Level Scoping	1356
The Notion of Global Variables	1357
Using Console Output	1357
Language Differences	1357
Working with Data Types	1357
Type Casting	1359
Declarations	1359
Statement Termination	1360
Regular Expressions	1360
OOP Differences	1360
Classes, Filenames, and Packages	1360
Polymorphism	1361
Inheritance	1362
Access Modifiers	1362
Dynamic Classes	1362
Summary	1363
Index	1365
